ARTICLE IN BRIEF

THE EFFECT OF THE VARIOUS TYPES OF EXERCISE ON THE HEART
The heart is a muscle and like all muscles it becomes adapted to the work it is called upon to do. The heart of a man who is accustomed to a sedentary life is smaller and weaker than the heart of a man who is accustomed to a life of active exercise. The heart of a man who is accustomed to a life of active exercise is larger and stronger than the heart of a man who is accustomed to a sedentary life.
